EDUCATION

- 2020 - **Continued Learning**, I continue to enhance my knowledge every day. Whenever I hit a wall, I go back and learn the fundamentals.
- 2014 - **GMC**, Attended Georgia Military College where I finally discovered college is not the right place for me.
- 2007 **CVCC**, Attended Chattahoochee Valley Community College where I attempted to regain a diploma. I discovered that college might not be the right choice for me, took a year of music, english, and keyboarding where I found out I have a love for all three.
- 2000 - **Learning Seminars**, Attended multiple learning seminars and attended many meetings and conferences. Both online and in real life as a requirement at the time for my employment.
- 1990s **Online Learning Classes**, Learned a lot about different operating systems other than what was available locally. Was introduced to compiling the Linux kernel and several interesting things that taught me valuable lessons that would later become my foundation.
- 1980s **Offline Learning Classes**, Self taught computer classes. I mostly learned from library books and old manuals. Learned to fix computers at a very young age. Was the 'GO TO' guy to fix almost everything electronic starting since I was very young, before age 10. Learned to use the computer and spell my name before I was 5 years old.

EXPERIENCE

- 2020 - **Unemployed, Currently**, Right now, I'm on the hunt for a job. I have the will, I have the way! I just need... The Job.
- 2016 - **Construction, Various Positions**, did a few jobs for some construction operations here. Nothing too professional or large scale. I am not certified so that should tell you. I then decided to help my mother fix her house up. We've done a lot of work and I've obtained a lot of new skills.
- 2008 - **Info-Nex, Owner**, Actually owned quite a few businesses and monikers. Info-Nex was the computer sales and support website. I had a hosting company, and a website design company. This was the first time I thought I would be able to handle having three businesses. I did, they ran well. Business dried up around 2011 to the point of non-existing and after experiencing personal issues, I decided to just call it quits.
- 2004 - **Self Employed, Only employee**, Was self employed and had a lot of business going but was unable to obtain more. Customer base was aging and eventually around 2008 the customer base was little and consisted of very few people. There was no official name or title for the company. It was just an odd job kind of deal. I did other jobs other than technology. Delivery Jobs, Food Prep, various other industry jobs I'd just like to forget.
- 2000 - **Littleton Consulting, Consultant**, Littleton Consulting was a firm based in Columbus, GA. Founded by my father, Peter H. Littleton, it was the first real world experience I had with large scope projects. I successfully linked cities using VPN's, Advanced Server Technology, and was streamlining the installation of large amounts of PC's by myself. I had no outside help, my father was aging and while he knew quite a lot, the newer stuff was left up to me. He passed in 2004.
- 1997 - **Computer Renaissance, Manager/Head Tech**, worked my way up to manager, as well as head technician at the ripe age of only 16 years old. The business was suddenly shuttered and no explanation was given. It was my first experience with loss.

SKILLS

IT

Databases, HTML, Jekyll,
Linux, Microsoft, Unix,
SQL, TCP/IP, IP/SEC,
Cryptocurrency,
Stock Trading, Encryption

HARDWARE

Desktops, Laptops,
Servers, Blade Servers,
POS, Networking,
Network Cabling,
CCTV Camera Systems,
Smart Devices, IOT

PHONES

(Androids only) I do not
work on apple phones.

WIRING

Network Cabling, VO/iP
Wiring, Camera Cabling,
Token Ring and Other
Legacy Wiring

SERVERS

Blade servers, 1u 2u
etc, Legacy Servers,
UNIX, MS Server, Linux,
Open Source

INFO

I'm a great employee. I simply want to do my job. I have no agenda to push. I'm not expecting to get rich from showing up for work. I've had more than enough experience to let my next employer know they are getting a great employee. Simply working with me for longer than 5 minutes is enough to let most people know how capable I am.

I just want to fix computers. I've spent a lot of time learning to fix computers. It's not just a hobby but a profession and has been for many years. I've held many other jobs but the technology sector is where I belong.

I am also very capable of learning and mastering new technology.

I do not drink not even occasionally. It just doesn't appeal to me. I don't take any medications. I don't abuse substances, I'm responsible, well mannered, and polite. I can also cut a fool and enjoy doing so.

I'm also very intelligent. Let's say there is a job that needs to be done, however, I'm unfamiliar with the software required to complete the job. What I would do would be to learn the software and try to familiarize myself with the task that is about to be performed. I would not panic and complain, I would simply learn the software so that I am better prepared. It's very rare that a solution requires me to go beyond my scope of ability and seek outside help, however, when the situation calls for me to seek outside help, I will do so.

Loyalty is another one of my strong suits. If you support me, I will remain loyal to you no matter what. I have never, nor will I ever go behind any one's back to sabotage or perform any underhanded task. If I have a problem, I voice my issues, confront the problem, and that's that. I simply won't involve myself with that person again. Life is too short for negative type of behavior and I'll have no part in it.

I'd really enjoy working with someone who values my work and my time. I put forth the effort and don't want to just run out the clock. I want to work with someone who understands this. I'm not asking for extra special treatment by any means. I'm simply stating how much I love working and would like to be treated as a person and not just as a mere business asset. **Nothing extra, just some basic consideration.** Day to day life happens. In other words, I don't want to work for a bunch of robots who are going to treat me terribly.

Thank you for considering me and reading my resume.
